

RAMPION OFFSHORE WIND FARM OFFSHORE CONSTRUCTION WORKS

Rampion is a major infrastructure project with offshore construction works continuing until 2018. The construction site includes:

- 116 turbines on monopile foundations located 13-20km offshore
- inter array cables connecting the turbines to an offshore substation
- the export cable route to shore at Brooklands, Lancing

During construction, there will be a large number of vessels with restricted manoeuvrability employed on site and high-speed craft operating to and from the site from Shoreham, Brighton and Newhaven.

For your safety:

- mandatory 500m Safety Zones are in place around construction activities and major construction vessels
- recreational sea users should keep well away from the entire construction site, they should not dwell on or near the proposed high speed craft route centre lines and be particularly vigilant in the vicinity
