

# Zephyr and The Radical Recycling Rubbish Robot

Zephyr is an incredible inventor, who one day had a great idea to build a robot that clears rubbish from the beach. Zephyr called his invention the Radical Recycling Robot. He was bright blue, had sharp teeth and was gargantuan.

Zephyr decided to take his Radical Robot to Kamilo beach in Hawaii as it's the most plastic cover beach in the world. There was so much dirty plastic on the beach that you couldn't see the golden sand. It made Zephyr feel very sad but he was determined to clean it all up with his robot. Suddenly, he felt a big gust of wind fly past him and it was a large albatross. The albatross said "Can I help you clean up the rubbish on the beach? I could drop some of the plastic into the robots mouth."

As quick as a flash, they all worked together to clear the beach. At the end of the day, the beach looked clean and beautiful. Zephyr and the albatross built golden sandcastles to celebrate!

Once the rubbish had been collected, The Radical Recycling Rubbish Robot pooped out hundreds of useful recycled objects. There were flip flops, hula hoops, kayaks, toothbrushes and even reusable water bottles.

Later on, when Zephyr and the albatross were about to go home, they saw lots of turtles come onto the beach to lay their eggs. Zephyr and the albatross felt very happy and knew they had done a good job.

THE END
